Summary

Software Engineer specializing in modern JavaScript and TypeScript ecosystems, with hands-on experience building scalable web applications using React, Next.js, NestJS, and Docker. Experienced in designing secure authentication systems, RESTful APIs, and full-stack web applications with a focus on clean architecture, performance optimization, and maintainable code. Passionate about solving complex engineering challenges, continuously learning new technologies, and delivering reliable, high-quality software.

Education

Bachelor: Biomedical engineering

Islamic Azad University

07/2023 | Tehran-Iran

Languages

persian ● ● ● ● ●

Native/Bilingual

English

B1 – Intermediate

Professional Experience

Fullstack developer

Sharif Dynamic

02/2025 – 12/2025 | Tehran-Iran

As a Full-Stack Developer at Vira Sanat Pouya Sharif, I leveraged my DevOps experience to build robust, scalable systems. I handled everything from containerizing services with **Docker** and managing traffic via **Nginx** to developing features with **Node.js**, **Express**, and **React**. I also successfully tackled the challenge of implementing an interactive geospatial mapping solution with **Leaflet** to visualize complex data sets.

Frontend developer

Nahallt

06/2024 – 12/2024 | Tehran-Iran

Tasked with revitalizing a buggy legacy e-commerce store, I spearheaded a complete codebase refactoring, focusing on security and scalability. I transformed the platform into a fully functional multi-vendor marketplace, allowing third-party sellers to list products. By implementing **React** and **Redux Toolkit** for state management, refining **API integrations**, and conducting comprehensive **testing and debugging**, I stabilized the system and successfully modernized the user experience.

React Mentor

Nahallt

06/2024 – 12/2024 | Tehran-Iran

During my time at the company, I also mentored interns in React, helping them understand core concepts and practical development patterns. Teaching these topics strengthened my own understanding of React and improved my approach to frontend development.

{ } skills

- **Programming Languages** — JavaScript (ES6+), TypeScript
- **Frontend Development** — React, Next.js, HTML5, CSS3, Bootstrap, MUI, Redux, Zustand, Axios, React Query, Figma
- **Backend Development** — Node.js, Nest.js, Express.js, Fastify
- **API & Communication** — RESTful APIs, GraphQL, WebSocket, Socket.IO, gRPC
- **Databases & ORM** — PostgreSQL, MySQL, MongoDB, SQLite, Prisma.js, Sequelize
- **DevOps & Infrastructure** — Docker, Nginx, Linux
- **Testing** — Jest, Vitest (Unit, Integration, E2E Testing)
- **Tools & Version Control** — Git, GitHub, GitLab
